

AK 0002

SEMI AUTOMATIC HAND HELD SCREW CAPPER

The AK 0002 hand held capper can easily tighten screw type bottle caps. Complete with adjustable clutch to set the torque with a simple turn of a knob that helps eliminate cap damage. The capper comes complete with an adjustable overhead self-balancer with support stand and is available in a choice of pneumatic or electric versions.

MACHINE FEATURES

- Choice of pneumatic and electric versions.
- A range of chuck inserts to suit a wide variety of cap shapes and sizes.
- Excellent combination of value, power and ergonomic features.
- Push-to-start for easy operation.
- Precision automatic stop.
- Low noise, low vibration and excellent torque repeatability.
- Forwards and reverse switch.
- Tool-less torque adjustment using an external knob.
- Reducing labour fatigue and repetitive strain injury.

To begin operation, gentle downward pressure is applied on the bottle/cap which enables the chuck to spin. Once the cap is tightened to a preset torque the chuck automatically stops spinning and is ready to move onto the next bottle.
