

# AK 0002

## SEMI AUTOMATIC HAND HELD SCREW CAPPER

The AK 0002 hand held capper can easily tighten or remove screw type bottle caps. Complete with adjustable clutch to set the torque with a simple turn of a knob that helps eliminate cap damage and reduces insert wear. The capper comes complete with an adjustable overhead self-balancer and support stand.

Standard

Can also be incorporated into a line

### MACHINE FEATURES

- Available in pneumatic and electric versions
- A range of chuck and inserts to suit a variety of cap sizes
- Excellent combination of value, power and ergonomic features
- Easy push-to-start for easy operation
- Precision automatic stop
- Low noise, low vibration and high accuracy
- Reverse/forward switch
- Torque adjustable by tool-less external knob
- Reducing labor fatigue and repetitive strain injury

### OPERATION

To begin operation a gentle push down on the bottle causes the capper to engage with the cap as the pressure is applied down on the bottle, no on/off switches or levers. Once the cap is tight, the chuck automatically stops spinning signaling you can move on to the next bottle.
