TECHNICAL SPECIFICATION

Dispensing Speed:	Up to 13 products per minute.
Spool Diameter:	Up to 260mm
Maximum Label Height:	190mm
Label Roll ID:	75mm
Space Between Labels	3-5mm
Build Standard:	cGMP, CE marked in accordance with Machinery Directive 2006/42/EC
Power Requirements:	230V 50Hz 1Ph
Nett Weight:	110Kg

OPERATION

The CDE 0001 is operated using a simple control. Once the machine has been adjusted to the product specification range, bottles are then placed onto the conveyor. The bottles then pass a bottle product sensor signalling the labelling head to dispense one label on to the passing bottle.

The leading edge of the label is tacked onto the bottle which then enters the wrap around belt assembly. The bottle is rotated applying the label smoothly onto the surface of the bottle. The labelled bottles then accumulate on the collecting tray.
